

REMARKS

Applicant appreciates Examiner's allowance of Claims 1-26, 28-69 and 74-76.

Claims 70-73 were rejected as being anticipated by Sakamoto et al. ("Sakamoto"). Step (c) of Claim 70 has been amended to describe storing in memory within a paging unit information relative to the identification of the second transmission system and the second radio frequency from at least one of the system messages of step (b) of Claim 70. Sakamoto does not describe any storing of information relative to the identification of a transmission system and information relative to the identification of a radio frequency from any received system message. In contrast, Sakamoto describes a two-way device that senses electric field intensity difference between regional cells operating different frequencies, and then registers to the cell with the higher intensity signal (see column 18, lines 46-67). This is not comparable to the storing of information of Claim 70. Accordingly, Sakamoto cannot anticipate Claim 70.

Claim 71 describes the paging unit of Claim 70 as being adjusted automatically to receive page messages from the second transmission system in accordance with the information stored in memory in step (c). Since no information is stored in Sakamoto from any received system message, Sakamoto cannot anticipate Claim 71.

Storing in memory at step (B) of Claims 72 and step (B) of Claim 73 is also lacking in Sakamoto, and thus Sakamoto also cannot anticipate Claims 72 and 73. In light of the above, withdrawal of the rejection to Claims 70-73 is respectfully requested.

It is believed the application is in condition for allowance and a Notice of Allowance is respectfully solicited.

Dated: December 8, 2004

Respectfully submitted,

Kenneth J. LuKacher
Attorney for Applicant(s)
